

## Numeracy K Weekly Activities

### Activity 1: Counting to 10

#### Materials Needed:

- Any objects around the house that can be counted—toys, beans, crackers, rocks.

#### Task Instructions:

Introduce students to the routine of counting collections—count different collections of objects in the home. This can be done with any similar objects such as toy animals, cars, stuffies, spoons. It can be done outdoors with rocks, pine cones, sticks, or leaves. Engage children in counting up to 10...extend to 20 or higher after they perfect 10. This should be repeated many times with a variety of items.

Ask questions after the child has counted:

- How many did you have?
- Did you get the same number if you count again?
- How much is one more or one less?

PARENT TIP: Get deeper background on this task here:
