

Earth Resources 1

The Earth is our home in the vastness of space. It sustains many life forms from single cell organisms to large complex plants and animals. Life on Earth can only exist because of the variety of living and non-living resources available to it. We will study a type of non-living resources called earth resources. These are non-living resources generated by the Earth and the processes that shape the earth's surface.

Watch this video about [Earth Resources](#), and complete the following questions and table.

Earth resources are _____ resources generated by the Earth and can/cannot be replaced.

<p>AIR as a resource Air contains the gas: _____</p>	<p>Name 2 ways we use air in everyday living:</p> <ul style="list-style-type: none">• _____• _____ <p>Name 1 way everyday living can change air quality</p> <ul style="list-style-type: none">• _____
