

# Exploration –Thinking Like an Explorer (Gr. 5)

<b>Curriculum:</b> Social Studies Science Language Arts Art	<b>Learning Goals:</b> -Demonstrate curiosity about the natural world -transform ideas and information to create original text -create artistic work collaboratively or as an individual using ideas inspired by imagination, inquiry, experimentation and purposeful play
---	---

<b>Materials</b> Paper Pencil Recycled material from home Cardboard Scissors Tape Markers
--

<b>Activities</b> <p><b>Part 1:</b> You are a brave and fearless explorer. You have discovered a deserted island. Create a map of your newly discovered island that includes the following:</p> <ul style="list-style-type: none"><li>- The name of your island</li><li>- A compass (ensure that North is placed in the correct direction)</li><li>- Titles of the different parts of the island (be creative with the names)</li><li>- Symbols that indicate different features of your island. This can include: treasure, hidden cave, quick sand, vine ladders, bridges, and bodies of water.</li><li>- A Legend that includes all of your symbols.</li></ul> 
---

**Part 2:** Are you passionate about animals? As you explore your deserted island you stumble upon a new animal species that you have never seen before. With various recycled material you have available at home create a 3D NEW animal species by yourself or with a sibling. What special features does your creation have? Perhaps wings? Unicorn like nose? Dragon like tail? 6 legs? Write a paragraph describing your animal characteristics- what it looks like, what it eats, where it lives on the island and how it got there and any unique features it has! Remember to come up with a creative name for your new animal species.

Check out this Switchzoo animal site for some ideas: <https://switchzoo.com/>

**Thinking Like a Biologist Extension:** Meet a real Biologist expert named Charles Darwin. After you view the movie clip design one of the animals that he discovered on the Galapagos islands and tell how you think the animal evolved and what unique features it has.
