

Numeracy Gr 1 Oct 5

Activity 2: Ordering numbers to 20

Materials Needed:

- numbers below, cut up. Alternately, if you do not have a printer, just write the numbers on small pieces of paper or cardboard.

Task Instructions:

Print off the grid below and cut up the numbers. Have your child start with a pile of numbers 1-10, shuffle and have the child put them in order. When they can do this easily, give them 1-20, then 1-40. If they perfect that, give them only a set of the middle numbers (say 28-35) and have them order those, because it is important to not always start at 1.
