

Numeracy K Oct 26 How Many Petals

FLUENCY

Materials: Pencil, Dice, 16 counters (can use beans or small rocks)

You can play alone, or alternate turns among 2 or 3 players.

To start, write the number of petals in the centre of each flower.

On your turn, roll the dice and say the number.

Put a counter on the flower with that number of petals. If you get a 1, put the counter on the watering can. Go on until the counters run out.

Which flower has the most counters? That flower wins...now colour it!
