

## Inquiry Question

Imagine you had a friend with no feeling. How would you describe how something felt?

Name: \_\_\_\_\_ Date: \_\_\_\_\_

You cannot turn off touch.

It is always working; right now, you are probably touching the computer and sitting on a chair. Your fingers are touching the computer and it feels hard. Your bottom is touching the chair and it probably feels soft and squishy.

Did you know:

- your sense of touch gets worse with age
- you have a special system that makes pain hurt

## General Instructions

For fun: try putting on a pair of gloves and they try to guess what it is. What happened?

### Materials you'll need:

- A cardboard box or pillow case
- spoon
- ball
- block
- sponge
- cotton ball
- feather
- orange
- rock

As you try to guess, try describing if they are smooth, bumpy, rough, soft, hard, etc.

### Hints and Ideas:

For this experiment, the object is to hide an object inside the box or pillowcase and have other people try to guess what it is just by feeling it with their hands. The box or pillowcase are to separate your sense of touch from your sight and hearing.

### Project Submission

Use a poster, video, slideshow, or photos to show the changes you make. You can either submit picture or file of this project.

Imagine you had a friend with no feeling. How would you describe how something felt?
