

Grade 4 Science  
Week of February 1 – February 5

**Biomes - Savanna**

Tropical grasslands, also known as savannas, are found in hot parts of the world with dry and rainy seasons. Unlike many plants, grass can survive periods of drought by becoming dormant.

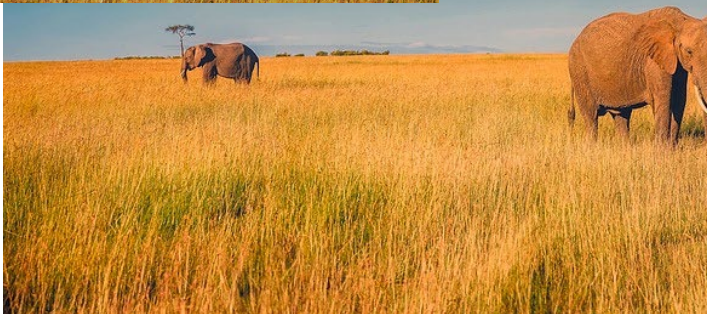

During the dry season, the grass looks dry, parched and lifeless. When the rains come, though, the grass springs to life, becoming lush and green

Biomes Savanna: <https://youtu.be/Tuk-JW-wng0>

**Cool Facts:**

- Lions can grow up to 10 feet in length
- Giraffes are the tallest animals in the world at growing up to 20 feet tall!
- Cheetahs are the fastest land animal and can run in bursts of 70 miles per hour

## Savannas

1. In the savannas there is a \_\_\_\_\_ season where the grass looks dry and parched.

2. Most of the rain falls during one period called the \_\_\_\_\_ season.

3.
